March's Theme: Disney Rhythms

Heigh-Ho! Heigh-Ho! It's off to music we go! Your favorite Disney characters are here to help build your repertoire of rhythms.

Have you tuned your piano lately?

Q. Why do pianos need to be tuned?

A. Pianos are 85% wood and are affected by changes in humidity. The wood expands and contracts which alters the tension on the strings and causes the piano to go out of tune.

Q. How often does my piano need to be tuned?

A. At least twice a year (every 6 months). If your piano is brand new, it will probably need more.

Q. When is the best time to have my piano tuned?

A. After the seasons change is usually the best time because the humidity level is relatively stable.

Q. Where is the best location for a piano in my home?

A. Ideally you want to keep your piano on an inside wall away from heating/cooling vents and direct sunlight.

Q. Can you recommend a piano tuner?

A. Joe D'Alessandro is the best! 570-655-0414
